                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to the isolation of novel human enzyme polypeptides, and the cDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the encotional classes of toldoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of disorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. AlDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. AlDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. AlDS) autoimmune disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           metabolic disorders (e.g. phenylketonuria), inflammatory disorders (e.g. asthma), cardiovascular disorders (e.g. atherosclerosis), lood-related disorders (e.g. haemophilia), reproductive disorders (e.g. infertility) and infectious disorders (e.g. Influenza). The colynucleotides of the invention can also be used in gene therapy. ANUZ2915-AAUZ3814 represent the novel human enzyme polypeptides of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Claim 11; SEQ ID No 1747; 1180pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                    554

Vanderslice P., Craik C.S., Nadel J.A., Caughey G.H.;

"Molecular cloning of dog mast cell tryptase and a related protease:
structural evidence of a unique mode of serine protease activation.";

Biochemistry 28:4148-4155(1989).

1- FUNCTION: TRYPTASE IS THE MAJOR NEUTRAL PROTEASE PRESENT IN MAST
CELLS AND IS SECRETED UPON THE COUPLED ACTIVATION-DEGRANULATION
RESPONSE OF THIS CELL TYPE.

1- CAPALTIC ACTIVITY: Preferential cleavage: Arg-|-, Lys-|-, but
with more restricted specificity than trypsin.
                                                                                                                                                                                                                                                                                                                                                                                                                _CANFA
